

Line-of-Sight Desk Monitor Mounting Instructions

Each electric height-adjustable column comes with a removable VESA bracket that is used to mount the flat panel monitor.

Step 1 Using an Allen key (5/32" or 4mm), remove the two threaded screws that attach the VESA bracket to the column. Retain the screws.

Step 2 Lay the flat panel monitor face-down on a level surface. Using the mounting screws included with the monitor (four M4 x 10 mm screws) and a Phillips screwdriver, attach the VESA bracket to the back of the monitor. The screw pattern will be square - either 100 mm x 100 mm, or 75 mm x 75 mm, depending on the monitor used.

Step 3 Holding the monitor with attached VESA bracket securely in your hands, re-attach the VESA bracket to the column using the two threaded screws. Select a vertical slot so that the top of the monitor does not exceed the top of the column. Tighten the screws using the Allen key, while making sure that the monitor is level.
