

ISE CASE STUDY: Library Application

ISE Model: All-in-One Dual Electric Desk

The University of South Carolina's library was faced with a challenge with respect to its impractical use of real estate, unsecured computer equipment, and cable nightmare!

ISE's All-in-One Desk provided an excellent solution for the library. The All-in-One Desk eliminated the need for dedicated areas for computer work stations, providing increased real estate and layout flexibility. Also, for a high traffic, public access area, the ability to store away the flat screen when not in use was an ideal security solution, and the hidden wire management provided a safe and organized working area.
